

Crafting User-Centric Interfaces: Mastering Advanced Forms, Validation, Accessibility, and Branding

Introduction

- UI design impacts user experience
- Modern apps require advanced techniques
- Validation improves accuracy
- Accessibility ensures inclusiveness
- Consistent branding builds trust

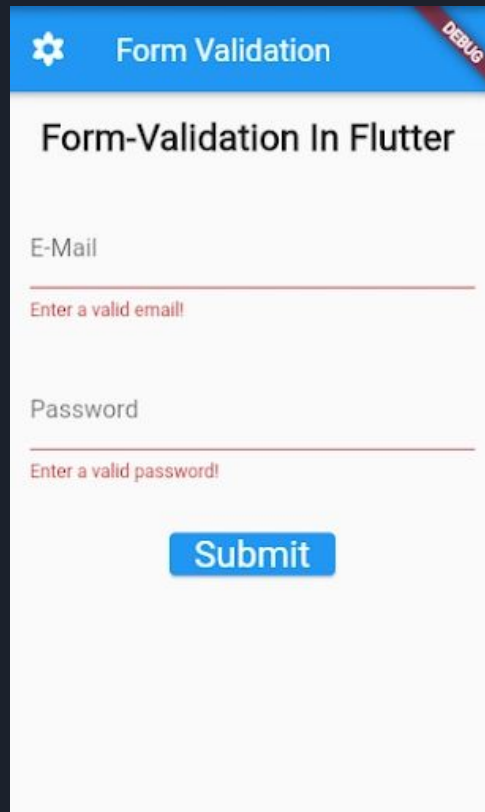

Advanced Forms and User Interactions

- Designing Intuitive and Efficient Forms
- Utilizing Advanced Form Controls and Input Fields
- Enhancing User Experience with Form Validation and Error Handling

Advanced Validation Techniques

- Implementing Comprehensive Form Validation Strategies
- Utilizing Regular Expressions and Data Validation Libraries
- Ensuring Error Prevention and User-Friendly Error Messages

The screenshot displays a mobile application interface titled "Form Validation" with a settings icon and a "DEBUG" label. The main heading is "Form-Validation In Flutter". Below this, there are two input fields: "E-Mail" and "Password". Each field has a red underline and a red error message: "Enter a valid email!" and "Enter a valid password!" respectively. A blue "Submit" button is positioned at the bottom right of the form.

Validations

(points of Flutter validation “email”)

- **Define Logic:** Create a function that returns a `String` for errors or `null` for success.
- **Regex Pattern:** Use `RegExp` to match the specific format (email, phone, password).
- **State Variable:** Declare a `String? emailError` variable in your state class to hold the error message.
- **Controller Setup:** Use a `TextEditingController` to extract the current text from the input field.
- **UI Mapping:** Link the `emailError` variable to the `errorText` property inside `InputDecoration`.
- **Triggering:** Call `setState()` inside `onChanged` or `onPressed` to refresh the UI with the error.
- **Validation Check:** Only proceed with your logic (like API calls) if the error variable is `null`.
- **Visual Feedback:** Use `ScaffoldMessenger` to show a `SnackBar` once the final validation passes.

Email Validation

```
final TextEditingController emailctr=TextEditingController();  
String? emailerror;  
String? valemail(String email){  
    if(!RegExp(r'[a-zA-Z0-9._%+-]+@[a-zA-Z0-9.-]+\.[a-zA-Z]{2,}$').hasMatch(email)){  
        return "error email id";  
    }  
    return null;  
}
```

Phone number

```
final TextEditingController phoneNumberController =TextEditingController();  
String? phoneNumberError;  
String? validatephoneNumber(String phonenumber){  
    if (!RegExp(r'^\d{10}$').hasMatch(phonenumber)){  
        return'Phone number must be exactly 10 digits';  
    }  
    return null;  
}
```

Username / password

```
String? validateusername(String username){  
    if(RegExp(r'[!@#<>?":_~;[\]\|\|=+)(*^%0-9-]') .hasMatch(username)){  
        return'Username must not contain special characters or number';  
    }  
    if(username.isEmpty){  
        return 'username cannot be empty';  
    }  
    return null;  
}
```

```
String? validetepassword(String password){  
    if (password.length <6){  
        return'Password must be at least 6 characters long';  
    }  
    if (!RegExp(r'[A-Z]').hasMatch(password)){  
        return'Password must contian at least one uppercase letter';  
    }  
    if (!RegExp(r'[0-9]').hasMatch(password)){  
        return'Password must contain at least one number';  
    }  
    return null;  
}
```

Accessibility and Inclusive Design

- Adhering to WCAG Guidelines and Best Practices (Web Content Accessibility Guidelines)
- Designing for Color Blindness and Visual Impairments
- Considering Screen Reader Compatibility

Theming and Branding

- Establishing a Consistent and Cohesive Visual Identity
- Implementing Theming Mechanisms to Manage UI Styles and Colors
- Creating a Visually Appealing and Recognizable Brand Presence

Exercise 1

```
exercise_1 > lib > editac.dart > editacState > build
```

```
1 import 'package:flutter/material.dart';
2 import 'package:flutter/services.dart';
3 class editac extends StatefulWidget {
4   const editac({super.key});
5   @override
6   createState() => _editacState();
7 }
8 class _editacState extends State<editac> {
9   final TextEditingController namectr = TextEditingController();
10  final TextEditingController emailctr = TextEditingController();
11  final TextEditingController phctr = TextEditingController();
12  final TextEditingController addctr = TextEditingController();
13  String? nameerror;
14  String? emailerror;
15  String? pherror;
16  String? adderror;
17  String? nameval(String name){
18    if(RegExp(r'[!@#<>?"':;|\\|\\|+)*%&0-9-}']).hasMatch(name)){
19      return 'Name must not contain special characters or number';
20    }
21    if(name.isEmpty){
22      return 'Name cannot be empty';
23    }
24    return null;
25  }
26  String? emailval(String email){
27    if(!RegExp(r'[a-zA-Z0-9.%+-]+@[a-zA-Z0-9.-]+\.[a-zA-Z0-9]{2,}$').hasMatch(email)){
28      return 'Please enter a valid email';
29    }
30    if(email.isEmpty){
31      return 'Email cannot be empty';
32    }
33    return null;
34  }
35  String? phval(String ph){
36    if(!RegExp(r'^\d{10}$').hasMatch(ph)){
37      return 'Please enter a valid phonenumber';
```

```
38  }
39  if(ph.isEmpty){
40    return 'Phno cannot be empty';
41  }
42  return null;
43  }
44  String? addval(String add){
45    if(add.isEmpty){
46      return 'Address cannot be empty';
47    }
48    return null;
49  }
50  @override
51  Widget build(BuildContext context) {
52    return Scaffold(
53      appBar: AppBar(
